Re: J/88 Forestay Specification

This confirms that -8 rod rigging may be substituted for 6mm Dyform for the J/88 forestay and remain within the build specification of the standard J/88. This applies to the lower forestay pennant as well.

-8 rod and 6mm Dyform are nearly the same diameter, weight, stretch and breaking strength, so there will be no noticeable difference in sailing performance.

Yours truly,

A handwritten signature in black ink, appearing to read 'Jeff Johnstone', with a stylized flourish at the end.
